This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (Original) Method for the isolation of RNA from samples, characterised by the following method steps:
 - a) provision of a magnetite solid phase;
 - b) provision of a binding buffer which comprises guanidinium thiocyanate in a concentration which, after mixing with the sample, produces a final concentration of > 2.5M guanidinium thiocyanate;
 - c) mixing of the sample with the magnetite solid phase and the binding buffer, where a phosphate concentration which supports the binding of RNA is present in this mixture;
 - d) isolation of the solid phase with the bound RNA.
- 2. (Original) Method according to Claim 1, characterised in that, after step d), the solid phase is optionally washed, and the RNA is subsequently eluted from the solid phase.
- 3. (Original) Method according to Claim 2, characterised in that the elution is carried out using elution buffers which facilitate a pH range > 7 and comprise phosphate.
- 4. (Currently Amended) Method according to one or more of Claims 1 to 3 Claim 1, characterised in that the binding buffer additionally comprises chelators, such as EDTA.
- 5. (Currently Amended) Method according to one or more of Claims 1 to 4 Claim 1, characterised in that the solid phase consists of magnetite particles having a diameter of 0.01 to 2 μ m and a specific surface area of 1 100 m²/g.
- 6. (Currently Amended) Kit for the isolation of RNA by the method according to one or more of Claims 1 to 5 Claim 1, at least comprising a magnetite solid phase and a binding buffer having a GTC concentration of greater than 3 mol/l.

- 7. (Original) Kit according to Claim 6, characterised in that the binding buffer comprises at least between 4 and 8 mol/l of GTC and between 5 and 200 mmol/l of EDTA.
- 8. (Currently Amended) Kit according to Claim 6 or 7, characterised in that the kit additionally comprises one or more of the following constituents:
 - an elution buffer
 - a wash buffer
 - a phosphate salt solution.
